Welcome to TESS Asteroseismic Science Operations Center

News

18th Dec 2018: Data Search has opened - with ASCII!

You can now search for TESS data through the TASOC website as easily as you have been able to search in the TIC. Just click the "Data Search" tab at the top of the page.

You will be able to download all data from sectors 1 and 2, both from the SPOC and TASOC. And you will be able to get all lightcurves in ASCII format as well.

12th Nov 2018: Help for reading FITS files

We have added some small code-snippets on how to load in FITS files in various languages (Python, IDL, Matlab) under "[Documentation and Help](#)".

In the future, the plan is that the TASOC website will also provide ASCII versions of light curves, as an alternative to the FITS files. These do use more disk-space than their FITS counterparts and will contain less information, so we would recommend to use FITS if possible.

6th Nov 2018: Second data release

We are pleased to announce the second release of TESS data for asteroseismology from the TASC Coordinated Activity T'DA. For this release 79 TOI targets from TESS sectors 1 and 2 have been analysed. These targets are primarily of interest to TASC WGs 1+2 (planet hosting stars and solar-like oscillators). Please note that this data is optimized for asteroseismology, and therefore the planetary transit signals have been intentionally removed.

TESS mission clock

Mission Clock:

263	07	17	20
Days	Hours	Min	Sec

Launch: Wed Apr 18 2018 18:51:00 GMT-0400 (Eastern Daylight Time)

Where is TESS right now?

TESS Data for Asteroseismology = T'DA

Key responsibility is algorithm development for extraction of light curves for

- Full-Frame Images (FFIs)
- Raw short cadence images
- Saturated images

Work done individually, via remote collaboration, and in a series of hands-on workshops

The screenshot shows the GitHub profile page for TASOC. The browser address bar displays "GitHub, Inc. [US] | https://github.com/tasoc". The navigation bar includes links for "Why GitHub?", "Enterprise", "Explore", "Marketplace", and "Pricing", along with a search bar and "Sign in" and "Sign up" buttons. The profile header features the TASOC logo, the name "TASOC", and the description "TESS Asteroseismic Science Operations Centre". It also lists the location "Aarhus, Denmark" and the website "https://tasoc.dk". Below the header, there are tabs for "Repositories 17", "Packages", "People 1", and "Projects". A search bar for repositories is present, along with filters for "Type: All" and "Language: All". The main content area displays a repository named "photometry" with the description "The basic photometry setup for TASOC". It includes tags for "space" and "photometry", and metadata such as "Python", "GPL-3.0", "1 fork", "4 stars", "3 issues", "0 pull requests", and "Updated 4 days ago". A line graph shows the repository's activity over time. To the right, a "Top languages" section lists Python, Shell, Fortran, and Jupyter Notebook. Below that, a "People" section shows one contributor.

Limited data release has begun!

<https://tasoc.dk>

The screenshot shows the TASOC website interface. At the top left is the TASOC logo. Below it is a navigation menu with buttons for Home, Information, Star Catalog, TIC Search, Data Releases, Data Search, Bundles, Publications, Wikis, My account, and Log Out. On the left side, there is a vertical menu with links to Home, Information (About TASC, Documentation and Help, T'DA Documentation, TASC Members, Mail-lists, Resources, TASC Conferences), Targets (Proposals, Proposal upload, TASC Target Lists, TESS Objects of Interest), Star Catalog, Search TIC, Data Releases, Search TESS Data, My Downloads, Data Bundles, Publications, Working Group Wikis (WG-1: Exoplanet hosts, WG-2: Solar-like, WG-3: Clusters, WG-4: AF-stars, WG-5: OB-stars, WG-7: Red Giants), Coordinated Activities Wikis (TESS Data for Asteroseismology, TASC-GI Coordination, Ground-based Coordination), and My account.

TASOC Data Releases

Here you can find TESS data released by the Coordinated Activity T'DA, which is responsible for light curve preparation for asteroseismology.

Data Release 4 – Sector 1+2 "raw" photometry for Full Frame Images (FFIs) and Target Pixel Files (TPF)

For this release a total of 2,495,083 targets from TESS sectors 1 and 2 have been processed, resulting in 1,733,576 light curve files. A limiting TESS-band magnitude of 15 was adopted for the analysis of FFIs.

Data provided with this release have been extracted using from calibrated target pixel files using the [TASOC Photometry pipeline](#). No subsequent corrections have been applied to the light curves. We are working hard on the implementation of the co-trending component of the T'DA pipeline, but release raw photometry now to allow the community to have a first look at the full data sets.

The TASOC pipeline used to generate the data is open source and available on [GitHub](#).

Please read the full data release notes for more details.

T'DA Data Release Notes

Data Release 4 for TESS Sectors 1+2

TASOC-0004-01

TESS Data for Asteroseismology (T'DA)

Rasmus Handberg & Mikkel N. Lund, Editors

March 1, 2019

This report is prepared by the Coordinated Activity T'DA of the TESS Asteroseismic Science Consortium (TASC), which is responsible for light curve preparation for asteroseismology.

Raw photometry for 2-min (TPF) and 30-min (FFI) cadence targets from TESS Sectors 1 and 2 are released with this note. The data summarised in this report can be queried via the TESS Asteroseismic Science Operation Center (TASOC)¹ data base. We are in the process of also making the data available as a High Level Science Product (HLS) on The Mikulski Archive for Space Telescopes (MAST)².

We are working hard on the implementation of the co-trending component of the T'DA pipeline, but release raw photometry now to allow the community to have a first look at the full data sets. The TASOC pipeline used to generate the data is open source and available on [GitHub](#)³.

Before using data from this release we strongly recommend you read through this note, and consult the TESS Instrument Handbook (Vanderspek et al. 2018).

It's not too late to become an asteroseismologist!

It's not too late to become an asteroseismologist!

Takeaways

Products and dates

- First full uncorrected data release (Segments 1+2) complete
- Full corrected data release (Segments 1+2) anticipated by end of August 2019
- Segments 3+4 will follow within a couple of weeks (3.3 million light curves total)
- Further TASOC releases will keep pace with TESS releases

Future Enhancements

- Custom corrected light curves
- Feedback from classification effort to systematics removal

Opportunities for Involvement in TASC

- Projects forming continuously
- Open to entire community
